Welcome to your new Acquia Drupal website!

If you are new to Drupal, follow these steps to set up your web site in minutes:

Step 1. Start at the beginning

Visit the administration section [1] for a task-based or module-based [2] overview of the options available to configure your website.

Step 2. Connect to the Acquia Network

At any time you can activate an Acquia Network [3] subscription to gain access to Acquia's timely, professional support, automated services, and documentation. Acquia offers subscription levels for every size web site - from individual blogs to enterprise-scale, multi-site deployments. Once you have your Acquia Network subscription keys, enter them on the settings page [4]. Get started with a free trial [3] today.

Step 3. Activate functionality

Turn on added functionality for your site - blogs, forums, polls, tags, comments, ratings, and more. Acquia Drupal comes with many modules [5] to power social publishing capabilities on your site. Hundreds of additional Drupal 6.x compatible modules are available on Drupal.org in the Drupal modules download section [6].

Step 4. Start publishing content

Start creating content [7] for your site. Depending on which modules you have activated, you may see blogs, forums, polls and more as available content types.

Some optional configuration tasks are shown below. For more information, please refer to the built-in help section [8], or the online Drupal handbooks [9].

Choose a different design

Start by changing the colors [10] of the default theme. To change the fundamental "look and feel" of your website, visit the themes section [11] and choose a theme from one of the many themes available out-of-the-box. Many additional Drupal 6.x compatible themes are available on Drupal.org in the Drupal themes download section [12].

Configure the front page

The default front page is a listing of all content marked as "Promoted to front page". You can manage your content from the content administration page [13]. You can also designate, for example, an item of content you have created as the front page. See the site information settings page [14] to configure the default front page path. You can also add a slogan and mission statement to make the site your own.
