The Master of Science (MS) in biochemistry and molecular biology provides students with a solid grounding in modern applications of biochemistry and molecular biology.

Candidates in this program are supported by two strong academic departments, chemistry and biology, whose faculty members combine exceptional teaching skills with pioneering published research in their respective fields, and fully equipped laboratory facilities with innovative equipment.

Students with a BS in biology, chemistry, or biochemistry, preferably with experience in physical chemistry, physics and mathematics may enter the master’s degree program. It is preferred that future MS candidates have had some research experience in their undergraduate careers.

The program is anticipated to launch in fall 2015
