MASTER THE WORLD OF ENVIRONMENTAL POLICY
Pace University’s two-year, 45-credit MA in Environmental Policy program provides an interdisciplinary training program, employing an educational approach that fosters analytical skills to deal with the practical aspects, and profound challenges, of local, national and global environmental affairs.

The curriculum emphasizes classroom-based skill development, training in the practical policy arts, and experiential learning through externships. It culminates with a capstone course that challenges you to use your newly acquired skills in your chosen area of policy research and analysis. Our goal is to assure that each of our graduates is “practice-ready” for the full range of environmental policy professions.

Year One
