Interested in a career preserving the world’s animal diversity and habitat? Then you should attend…

**Careers in Wildlife Conservation**

*Date: Wednesday March 25, 2015*  
*Time: 12:10-1:10*  
*Place: Environmental Center Classroom*

No matter where you live, at times you are likely to encounter various species of wildlife. Coexisting with regional forms of fauna and flora requires a certain amount of conservation management. You have the opportunity to come and meet our wildlife experts for a panel discussion about our connections to wildlife.

Each panelist will also discuss their work, how they became involved in their careers and what paths students should consider who are interested in working in the wildlife conservation field.

**Panelists will include:**

**Professor Jeff Main** – Program Administrator, Westchester County Parks  
**Dr. Mike Rubbo** – Director of Conservation Science at Teatown Lake Reservation.  
**Dr. Melissa Grigione** – Professor & Director Graduate Program in Environmental Science, Department of Biology and Health Sciences  
**Dr. Chris Nagy** – Director of Research and Land Management, Mianus River Gorge, Bedford, NY

Time will be left at the end for questions and a pizza lunch will be served. Please RSVP to lsorrentino@pace.edu.

Hope to see you all there!
