HEALTHCARE DELIVERY USING TECHNOLOGIES:
DEVELOPMENTS & TRENDS DRIVING TECHNOLOGY SUPPORTED CARE & SERVICES

Technology is transforming the healthcare industry, empowering healthcare providers with cost-effective tools that increase access to and lower costs of care. In parallel, technology is enabling patients and consumers to be active participants in their care management.

DISCUSSION OF THESE TRENDS WILL INCLUDE:

- Mobile and e-Health technologies for care delivery in clinical and nonclinical settings
- e-Health technology for Health Information Exchange (HIE)
- Telemedicine tools for diagnosis, treatment and disease monitoring
- Telehealth technologies for care coordination between clinical and nonclinical settings to prevent readmissions
